

There was a time when Gödel's incompleteness theorems got under my skin, I kept hearing in them a suggestion that the world can never be fully known. Maybe it cannot. But that has never struck me as a reason to stop trying.

I am a young researcher by trade, with Eastern European roots and the particular self-reliance that comes with them, in work and in life alike, learned early and never really unlearned. These days I have put down roots of a different kind, in the lovely city of Munich, where I intend to spend the coming decades.

Behind me lie countless hours of mathematics, physics, the craft of programming, scientific computing. On paper I come out of academia, but I read business and corporate life fluently too, and I have learned to fold scientific rigor into the flexibility industry demand.

I count myself lucky that my career began right as the AI boom took off. In my earlier projects, what I loved most was exactly what AI still cannot do, hunting for an unconventional way into the hardest problems, while writing precise, polished, readable code buried in $O(n)$ optimizations always felt like a formal exercise, and frankly, a dull one. So, I am glad AI has taken that part off my hands, and my own work has only gotten sharper for it.

Backed by that experience and sharpened with AI tools, I am already tackling, and mean to keep tackling, the kind of complex business problems that start right where the standard playbook runs out.

OFF THE RECORD

Professional

You can talk with me in German, English, or Russian

I chase whatever is new in Tech

Into political science, with a particular pull toward the theory of autocratic regimes ;)

Work style

Just as at ease working remotely as I am in a team

I joke around but keep it professional

I would rather tell you what's wrong than nod along

Used to fast pace and tight deadlines

Interests & life

Curious about mental health and how the brain works

Care about LGBT+

Animal welfare

Sport and action + try to live healthily

No smoking, no drinking
